

+ A Team Approach is the
+ Winning Combination
+

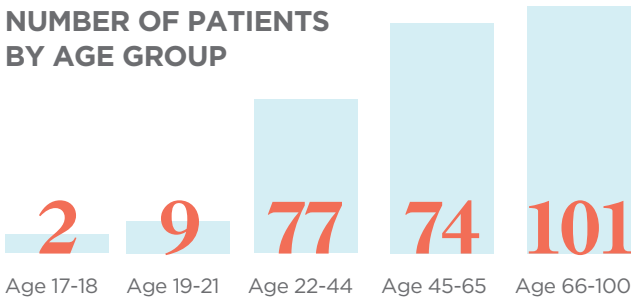

RHI’s interdisciplinary team provides the full continuum of care, from acute inpatient rehabilitation to getting patients reintegrated into their communities.

We had the privilege of treating

263
PATIENTS

NUMBER OF PATIENTS BY AGE GROUP

RHI’s percentage of patients who are being treated for brain injury is higher than the national average.

“Overall, our experience at RHI was incredible!
We are so impressed with the staff and the care received.”
A family member of Lilly, RHI patient

Case Mix Index (CMI)
RHI’s inpatients are admitted with more severe functional and medical complications (higher number indicates more complicated condition).

This measure takes a variety of patient factors into consideration such as age, medical factors and mobility and self-care function on admission. CMS uses this information to calculate the expected rate of improvement in mobility and self-care. A patient’s progress should meet or exceed the expected value.
